Subject: Investment in R&D&I

Dear Sirs,

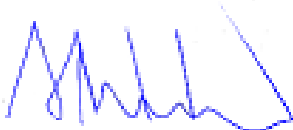

We are making known in the automotive sector the revolutionary invention of our client D Pascual González de Castro that has been patented as a utility model with the number U 00435555 granted by the Spanish Patent and Trademark Office on 23 September 2019

It consists of a control device and speed warning in vehicles that introduces the novelty to warn the driver when the permitted speed on the road is exceeded and communicates to the center of control the reason why it was exceeded when it was for a justified reason, such as for example, the risk of accident, thus avoiding a possible sanction. Visiting our web www.inventospatentados will be able to read the descriptive memory, drawings, claims, photos, and a video of the patent, with its novel features and technical advantages.

As you can give off this can be a very suitable product to inject something new and exclusive in your company, in addition to improving its position against the competition, since may offer a new product prohibited for this purpose.

If you wish we can send you our best license proposal to negotiate on a final agreement.

Grateful for the attention they give us and for the trust they place in us, they will be given to them. We salute you very sincerely,

Álvaro Herrera Dávila
Agent of Industrial Property No. 529, Collegiate No. 498
